## 8/16-Central

To ensure that Apple II and IIgs programmers get the support they need, A2-Central has purchased *8/16* magazine from Ariel Publishing Co. of Pateros, Wash.

*8/16*, which will now be called ***8/16-Central***, is the only monthly publication directed exclusively towards Apple II programmers. ***8/16-Central*** will be a 3.5-disk-based publication. Ariel's *8/16* was available in both paper and disk versions, but the paper version has been discontinued. The subscription price of ***8/16-Central*** is the same as the price of a disk subscription to Ariel's *8/16*.

***8/16-Central*** will include regular columns,

articles, and source code for 8- and 16-bit programs; want-ads; tutorials; and a question-and-answer section. Each disk will also include extra utilities and programs of interest to developers.

***8/16-Central*** will round-out our support of the Apple II developer. It fits in nicely with our other offerings for developers, including our summer conference, the Apple II Programmers and Developers RoundTable on GEnie, and the programming books and tools we offer through our catalog.

The new editor of ***8/16-Central***, Jay Jennings, has ties to both Ariel Publishing and A2-Central.

Jennings has been a contributing editor to *8/16* since its inception and has been employed by A2-Central since mid-1989. He says ***8/16-Central*** will remain true to the spirit of the old *8/16*. "The physical format of the magazine will change a bit since we're going to be totally disk-based, but the content-hard-core programming info-will remain the same."

## New Stuff

### Fix bad disks

Vitesse has added *Salvation: Deliverance* to its line of utility software. *Deliverance* is a GS/OS, graphic-interface based disk utility that reconstructs bad or damaged directories and recovers 'lost' files on all types of ProDOS and GS/OS disks. It can operate in a mostly-automated mode that requires only minimal decisions from the user and it also supports byte-level editing of any block on any volume.

An exclusive feature is a built-in file copy utility that allows *Deliverance* to make file repairs in system memory, then to copy the new, repaired file to another volume for testing or for comparison with the original.

*Deliverance* can also identify the bad blocks on a disk and mark them so that GS/OS and ProDOS won't even try to use them.

**VI-007** *Deliverance* \$37.00

*Harmonie* also comes with high-speed, GS/OS 5.0.3-compatible port drivers for the following parallel printer interface cards:

- ProGrappler, Grappler Plus
- Parallel Pro
- Epson APL
- II-Print

**VI-006** *Harmonie* \$37.00

### Electronic Imaging

We've decided to stock Digital Vision's **ComputerEyes** video digitizer. This device comes in two models. One is a **black and white** version that will work in any slotted Apple II and with any composite video source, including PAL and SECAM. By itself, it can create hi-res and double hi-res images. With optional enhancement software it supports *Print Shop* and *Newroom* formats, image negate, shrink/expand, left-right flip, and so on. With optional IIgs support software, it can create 320-mode graphics using a 16-level gray scale.

The **Color ComputerEyes** requires the North American standard NTSC video and an Apple IIgs. It can do everything the black and white digitizer and software can do, but it can also create 320-mode graphics with 16 colors and 640-mode graphics in black and white or four-level gray scale. These digitizers work best with still images from video cameras or video disk players. VCRs that can display a noise-free single-frame picture also work well. Scan times are less than 6 seconds except in 640-mode, which takes less than 12.

**DV-001** *B&W ComputerEyes* \$119.95  
**DV-002** *Enhancement Software* \$22.95  
**DV-003** *IIgs Support Software* \$22.95  
**DV-004** *Color ComputerEyes for IIgs* \$219.95

### Nexus

Since *HyperStudio* and *HyperCard* use the "stack of cards" metaphor, many people think that hypermedia is defined by stacks. But Hypermedia is defined by *links*. Hypermedia simply provides users with multiple paths through a set of informational material.

Another approach to hypermedia is to present the user with text and graphic files that have embedded links to other text, graphic, and sound files. For example, imagine that a highlighted word in a text file indicates that you can obtain expanded information on the word (more text, a picture, or a sound) by clicking on that word. Or imagine being able to click on a face in a photograph of a basketball team and getting a text file with that player's name and statistics.

Tracy Valleau's ***Nexus*** is an Apple IIgs program that allows you to create these kinds of "linked sets" of information. You can even edit the text or graphics without destroying the links. ***Nexus*** includes a file you can distribute so anyone can use your linked set. For more, see the April 1990 A2-Central disk, which includes a demo version of ***Nexus***.

**GC-001** *Nexus* \$69.95

### Drivers for HP printers

Many subscribers have asked us how to use Hewlett-Packard's low-cost ink jet and laser printers with the Apple IIgs. Here's how. Vitesse has just released a package of GS/OS printer drivers that it calls *Harmonie*.

*Harmonie* allows you to print from any GS/OS program to any of the following printers:

- HP DeskJet, DeskJet Plus, DeskJet 500
- HP PaintJet, PaintJet Plus
- HP LaserJet II, IIp, III
- Epson LQ 24-pin dot matrix printer
- Epson 9-pin printers (enhanced printing)
- Apple ImageWriter II (enhanced printing)

The *Harmonie* drivers are also compatible with many other printers that follow the HP or Epson standards.

We've decided we ought to carry *TimeOut UltraMacros* because it's more than just a macro program—it's a complete programming language for classic AppleWorks.

We also like Beagle Bros' *MacroEase* a lot. It includes *TimeOut* debugging utilities, seven full-blown macro applications, and 57 sample macros.

**BB-005** *TimeOut UltraMacros* \$49.95  
**BB-006** *MacroEase* \$34.95
